

DRIVE LONGER WITH DRIVE

LASTS
The **BATTERY** that **3X**
LONGER

The **DRIVE** Sealed Maintenance Free Batteries are built for the ultimate performance your vehicle needs for every situation.

ADVANTAGES

- Vibration resistance
- Better life cycle (3 times more energy throughput and 3 times more life in test conditions)

DRIVE

TOUGH BATTERY FOR TOUGH SITUATION

DRIVE

TECHNOLOGY

- Patented double lid with electrolyte level indicator (eli) according to oe requirements
- Plate group with extremely high vibration resistance and very low internal resistance due to newly developed cell connectors and schneidring
- Electrodes with nano carbon additive for enlargement of the surface of the active masses and for a particularly favourable pore structure.
- Grid technology: current flow optimized cast grids with extreme durability

THE DRIVE IS UNSTOPABLE FOR ULTIMATE PERFORMANCE

AUTOMOTIVE STARTER BATTERY

- Applicable to extreme and harsh environment from -300C~750C.
- Unique 4BS lead paste formula to enhance battery capacity and ensure strong, long-lasting power support.
- Application of new sulfuric acid additive, making fast charging available.
- Special grid structure and material to enhance vibration resistance performance.

AUTOMOTIVE EFB START-STOP BATTERY

- Frequent starts for more than 50,000 times.
- The battery can quickly return to full charging status after the vehicle is started.
- Stable performance under environment from -40C~80C.
- Fuel consumption reduced by 5%~15% under comprehensive conditions.
